# The Apprenticeships Module

The Apprenticeships module will make information about an Apprenticeship easily available. Replacing TYIMS registration, new features will be added to the module over the coming months until you will be able to view, search and manage an Apprenticeship across its lifecycle from a single location.

## What's here

Laying the foundation

The Apprenticeships module is now available in ADMS. Use the powerful search and filters to quickly **find apprenticeship profiles** and view information like Apprentice and Employer details, management history, and RTO history.

What's next

Moving to a single system

ADMS is on its way to becoming your single source of truth. Reducing your need to use TYIMS, you'll soon be able to **record in-training support services** in ADMS. The modern and intuitive style of the Apprenticeships module makes it easier to capture and use rich data.

What's coming up

Delivering streamlined Apprenticeship management

Track an Apprenticeship across its lifecycle, from commencement to completion. With connections to other modules in ADMS, you'll have a central location to **manage Apprenticeships holistically**.

Have your say
